## Application Report: The AdvantEdge™ Series Rotary Side Sealer

### Specifications:

- Same footprint as the standard AdvantEdge I60
- The key is the rotary seal head design—nothing runs this fast and this smoothly
- No price increase over the standard AdvantEdge I60!
- Dual Rotary seal head available for speeds of over 200 products per minute!

We thought it was time to re-visit the **Rotary AdvantEdge**; a machine that has been in the Conflex line since 2004, but has recently been gaining in popularity among certain customer segments.

### Why a “Rotary” AdvantEdge?

The rotary seal head design, perfected by Conflex over the years, is very fast and operates extremely smooth at high speeds. To your customers, this means higher productivity. Time is money for most businesses; and the less time a customer can spend wrapping, the better.

The Rotary AdvantEdge lends itself well to customers that currently side seal and could potentially run faster but don't due to the speed limitations of their current wrapper. How many times have you heard, “We can feed the machine faster, but don't because the machine bangs itself to death and we start to get bad seals when we turn it up”?

A big hurdle to overcome with high speed wrapping is efficiently feeding the product into the wrapper. Conflex offers a variety of infeeds to feed our high speed wrappers. Just show us your application, and we will fit you with the optimum feeding system.

The Rotary AdvantEdge incorporates the same simplicity of design and ease of use of the standard AdvantEdge, but we replaced the reciprocating seal head with a rotary and put in high speed motors. The same servo side seal, color touch screen and recipe package make product setups easy. All done for the same price as the standard AdvantEdge I60!

Request a sample run and video today of the Rotary AdvantEdge to share with your side sealer customer base.
